

Advancing Educational Equity in California:

Personalized, Accessible, and Secure Learning Solutions

Vision 2030 sets California community colleges apart with bold goals to pursue transformational change for every student. As your partner in continuous improvement, Honorlock can help California community colleges promote equity in success, access, and support.

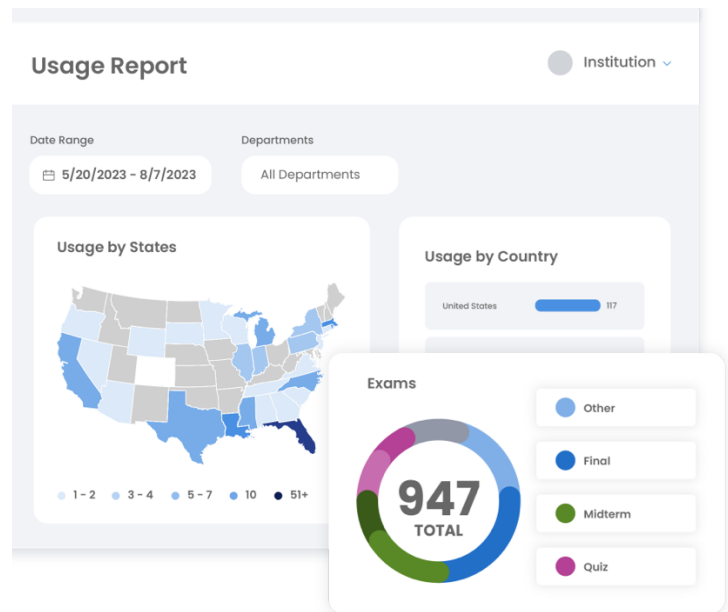

Goal 1: Equity in Success

Open Doors to Success with On-Demand Assessment

Providing flexibility for critical assessments expands opportunities for success. With Honorlock, California community colleges can offer flexibility and support for the diverse needs of students, especially as they juggle work and family commitments, or as extenuating circumstances arise, providing more pathways to academic success for all students.

Drive Decisions with Data

Prevent and deter academic dishonesty before it even occurs. Honorlock stops cheating before it happens by blocking AI tools and secondary devices, such as cell phones. We also block unauthorized websites commonly used to cheat and can back it up with our reporting. You'll see just how often Honorlock prevents dishonesty and identify what unauthorized tools your students attempt to use most frequently with Honorlock's Analytics Hub™, a 360-degree view of your integrity investment. Drive decisions and promote academic success with actionable assessment insights.

Promote Success Privately & Securely

As good stewards of your data and ultimately your students, Honorlock protects your information with the most robust security measures on the market. Learn more about the extensive security measures included within our proctoring service in our [Security Overview](#).

Minimize Anxiety to Boost Success

From our always-available student tutorial to our 24/7/365 US-based support, Honorlock prioritizes minimizing student stress. Honorlock understands how test anxiety can hinder performance and our [anxiety study](#) informs product development and services. We aim to reduce test anxiety to bolster success and students, agree.

Prepare Students for the Modern Workforce

Components of remote work are a reality in nearly every industry today. Students comfortable learning and collaborating remotely have an advantage as they enter the workforce. Utilizing tools that build experience with remote collaboration and engagement, such as Honorlock, California community college students will be better prepared for the modern workforce.

"Honorlock was less invasive than other proctoring software. I didn't have a live proctor hounding me before the test, which would heighten my anxiety... It just lets you take your test without any interruptions."

-Madi Koukos, Student

Goal 2: Equity in Access

Secure and Simplify Digital Learning

Students expect technology to fit into their lifestyles. Some students, particularly the underserved and those in rural communities, may struggle to access a hardwired Internet connection or an advanced machine. Students with fewer resources need a proctoring solution with minimal system requirements.

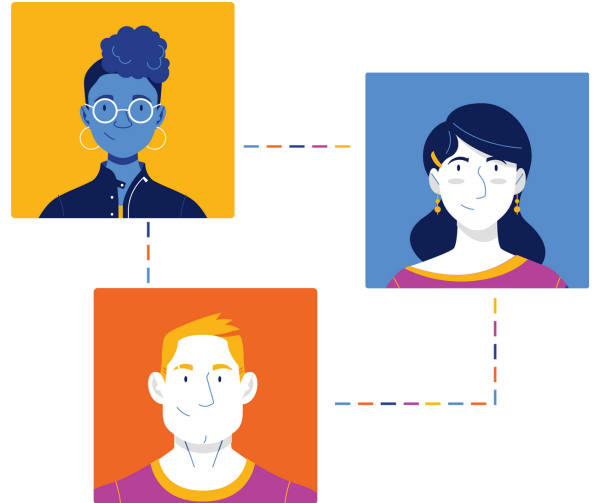

Designed for ease of use, flexibility, and reliability, Honorlock minimizes system requirements to expand access for all students. Honorlock works with Chromebooks, hot spots, basic, and unstable internet connections. Additionally, Honorlock's simple browser plug-in requires no bulky stand-alone app download for each student. And, our support team is always on standby to troubleshoot any issues. With Honorlock, California Community Colleges can make secure assessments accessible for all students.

Level the Playing Field for All Students

Leveraging Honorlock, California students can take their exams when and where it works best for them—regardless of their work schedules or access to transportation to reach campus. They'll save time and expenses with the flexibility of completing exams at home. With no scheduling ever required, students never need to reschedule nor incur any resulting fees. With other solutions, rescheduling fees quickly become costly for students. Honorlock eliminates these burdens, which often impact underserved students more, to pave the way to success.

Create an Equitable Exam Experience

Honorlock's accessibility-certified engineers develop our solutions and build features with an accessibility-first mindset. This means providing flexible accommodations for students carried out by our live proctors; integrating with assistive technology; fully complying with ADA and WCAG 2.1 level AA guidelines; routinely reviewing the accessibility of our offerings, and providing a publicly available [**Accessibility Statement**](#).

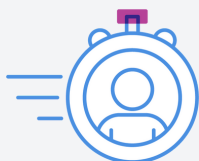

Goal 3: Equity in Support

Reliably Support Students and Faculty

Flexible examinations require flexible support and Honorlock has students and faculty covered. 24/7/365 secure chat support is included for all end-users. Instead of directing students and faculty to your institution's central IT support and adding to your support burden, we manage and resolve all pending exam issues.

Our Support Team:

Our support channels are secure, private, and easily accessible. Personal data is protected across our operations and every Honorlock employee is FERPA trained.

**Responds in < 15 seconds
and resolves issues
< 7 min on average**

**Resolves 99%
of all issues**

**Achieved a 94%
student satisfaction
rate**

In your pursuit of transformational change for every student, as outlined in Vision 2030, partner with Honorlock to promote equity in success, access, and support. As your partner, Honorlock can help you realize your vision for personalized, accessible, and secure learning and assessment for all California community college students.

To make evaluation easy for your team, we have a Master Service Agreement in place with the Foundation for California Community Colleges that includes special pricing to streamline the procurement process.
